

Solar panels harness energy from the sun to help power your home, reducing the amount of electricity needed from the utility grid. When paired with battery backup, excess energy produced during the day can be stored for use when you need it most.

BOA Builders incorporates professionally designed solar and battery solutions to create homes that are more efficient, resilient, and prepared for the future. Together, these systems give homeowners greater control over their energy use while providing added reliability and peace of mind.

Energy Savings

Generate clean energy right at home, reducing the amount of electricity you need to purchase from the grid and helping lower long-term energy costs.

Battery Backup

Store excess energy produced during the day for use when solar production is lower or during a power outage, providing added security and peace of mind.

Energy Control

Keep tabs on your solar production right from your phone. Individual panel monitoring gives you a clear view of how your system is performing.
