

SPAN Smart Panel

SPAN is a smart electrical panel designed to give homeowners greater visibility and control over their home's energy use. Replacing the traditional electrical panel with intelligent technology, SPAN allows homeowners to monitor and manage their home's electrical system right from their smartphone.

SPAN is designed to make homes smarter, more efficient, and ready for the future. From everyday energy use to EV charging, solar, battery storage, and other electric upgrades, SPAN provides a modern electrical foundation that can adapt as a homeowner's needs change. At BOA Builders, it's another way we incorporate forward-thinking technology to **Build. Better.**

Energy Insights

See how your home is using energy in real time. SPAN provides circuit-level insights, helping homeowners better understand where their electricity is going.

Smart Control

Manage individual circuits right from the SPAN Home App. Homeowners can monitor their electrical system and control connected circuits from virtually anywhere.

Future Ready

Designed for an increasingly electric home, SPAN can help support technologies like EV chargers, solar, battery storage, heat pumps, and other high-demand appliances.

Build. Better.
